
DSC 40B - Discussion 01

Problem 1. (Lab Problems)

What is the time complexity of the following functions? State your answer using Θ notation.

- a)

```
def foo(n):
    for i in range(n**2 - 2*n + 100):
        j = 0
        while j < n:
            j += 1
```
- b)

```
def foo(n):
    while n > 1:
        n /= 10
        print(n)
```
- c)

```
def foo(n):
    for i in range(n):
        for j in range(i**2): # <-- notice the bound!
            print(i + j)
```

Problem 2.

Consider the code below:

```
def foo(n):
    i = 1
    while i * i < n:
        i += 1
    return i
```

- a) What does `foo(n)` compute, roughly speaking?
- b) What is the asymptotic time complexity of `foo`?

Problem 3.

Let $f(n) = \sum_{p=0}^n 3^p$. What is f in Θ notation?
